March 7, 1986

The Honorable Les Aspin
Chairman, Committee on Armed Services
House of Representatives

Dear Mr. Chairman:

In response to your request, we are providing information on the changes in size and function of a number of the defense agencies. As agreed with your office, this fact sheet presents current and historical information on missions, work force, and budget for the Defense Advanced Research Projects Agency; the Defense Communications Agency; the Defense Contract Audit Agency; the Defense Investigative Service; the Defense Logistics Agency; the Defense Mapping Agency; the Defense Nuclear Agency; and the Defense Security Assistance Agency. As agreed, we did not include the Office of the Secretary of Defense, the Joint Chiefs of Staff, the Defense Intelligence Agency, the National Security Agency/Central Security Service, and other smaller agencies.

The information relating to changes in mission, budget, and personnel staffing levels contained in this fact sheet was obtained from agency and congressional sources and discussed with officials of the agencies. The detailed historical civilian work force data was obtained from the Defense Manpower Data Center. We did not verify the accuracy of the information provided.

Information on each agency's budget and civilian/military work force mix is provided for the earliest year readily available and for fiscal year 1986. Data on each agency's civilian occupational groups is provided as of September 1975 and September 1985, with the exception of the Defense Mapping Agency. The Defense Mapping Agency's civilian occupational data is furnished as of September 1975 and June 1985.

Generally, the information presented indicates that, most of these agencies experienced only moderate growth in staffing levels from 1975 to 1986.

In our discussions with agency personnel, several representatives expressed concerns over the possibly limited usefulness of such a

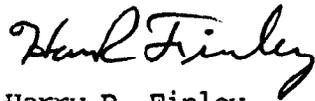

B-222170

snapshot presentation of an agency's development. Their primary concern was that significant changes to an agency may occur over time and any such changes and the underlying causes would not be reflected in such a presentation.

We will send copies of this fact sheet to interested parties and make copies available to others on request.

Should you need additional information or have any questions on the contents of this document, please call me on 275-4268.

Sincerely yours,

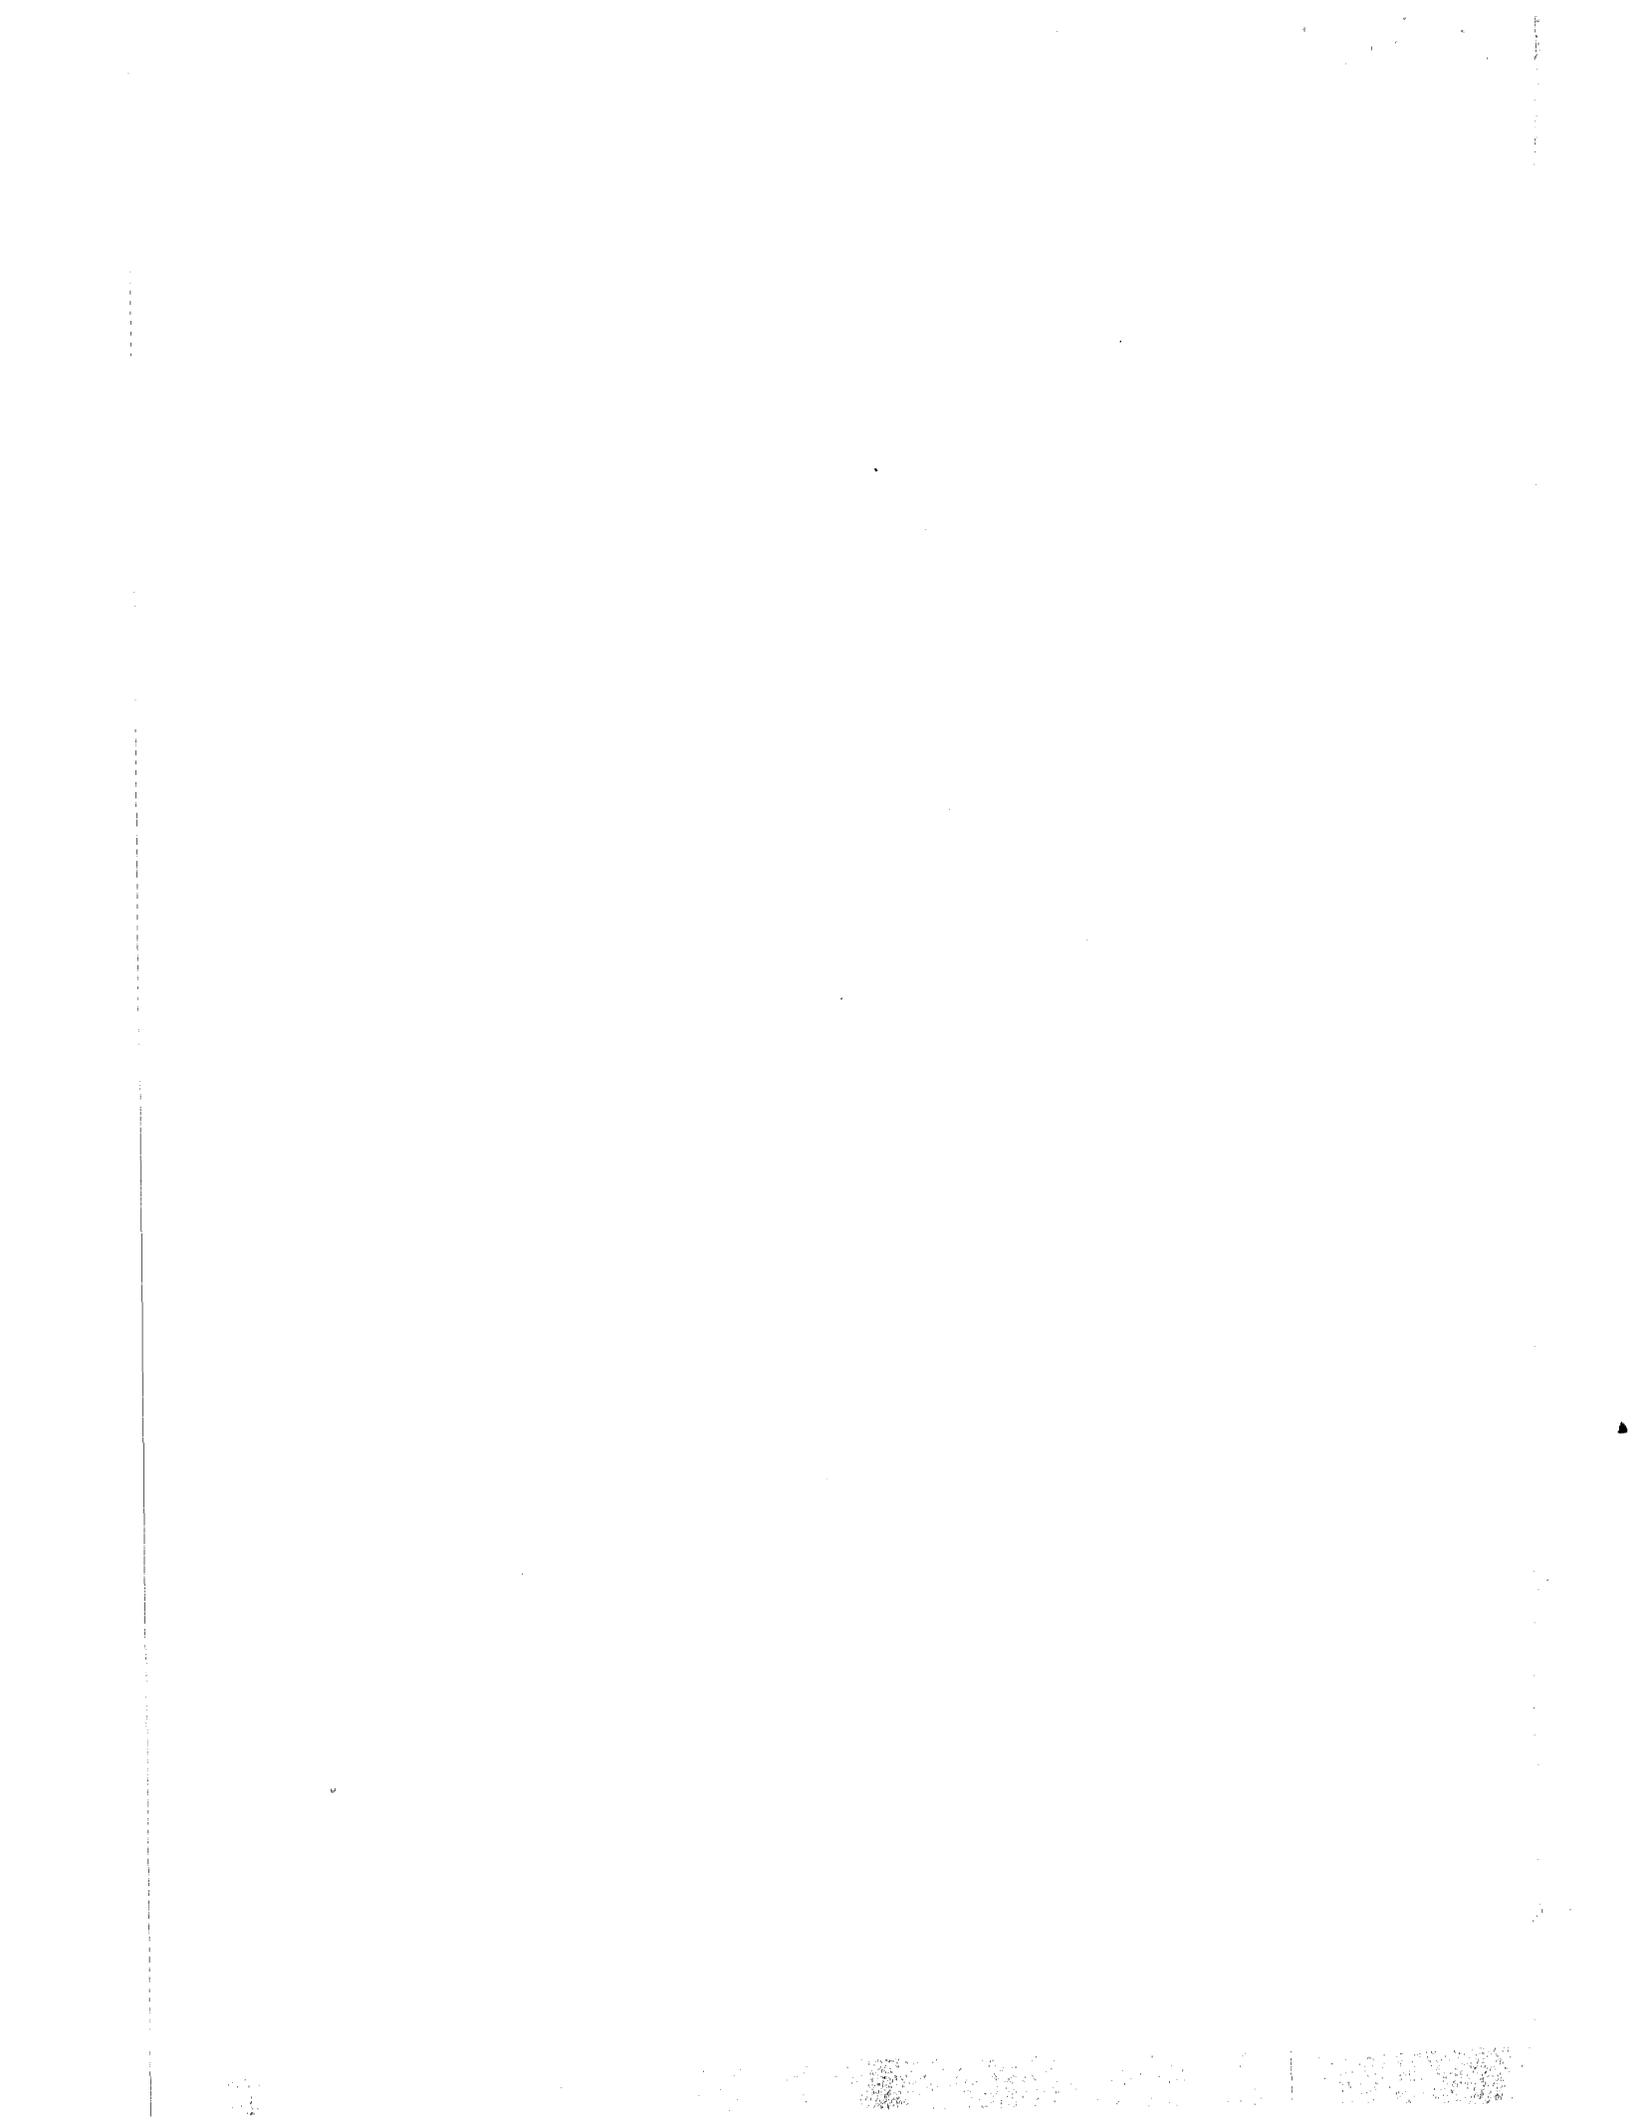

Harry R. Finley
Senior Associate Director

DEFENSE ADVANCED RESEARCH PROJECTS AGENCY**ESTABLISHMENT**

The Advanced Research Projects Agency was created under the authority of Public Law 85-325 in February 1958, and established as an operating agency under the Under Secretary of Defense (Research and Engineering). It was redesignated the Defense Advanced Research Projects Agency (DARPA) in March 1972.

MISSION

The creation of DARPA was, in part, a reaction to the Russian launching of Sputnik when the Department of Defense (DOD) realized it needed a high-level organization to formulate and execute research and development projects which would expand the frontiers of technology beyond the military services' immediate and specific requirements.

DARPA's mission is to help maintain U.S. technological superiority over the nation's potential adversaries. DARPA is the central research organization for DOD, and its goals are to

- pursue those highly imaginative and innovative research ideas and concepts offering significant military utility,
- support and manage projects assigned by the Secretary of Defense, and
- marshall advanced research through demonstration of its feasibility for military application.

DARPA has the responsibility to manage high-risk, high-payoff basic research and applied technology programs in projects as may be designated by the Secretary of Defense. DARPA's objective is to select and pursue revolutionary technology developments that minimize the possibility of technological surprise and/or offer potential for major increases in national defense capability. Research and development on projects is taken to the demonstration stage where feasibility and practicality can be assessed, and then the projects are transferred to the appropriate military services.

DEFENSE COMMUNICATIONS AGENCY

ESTABLISHMENT

On May 12, 1960, the Secretary of Defense established the Defense Communications Agency (DCA), primarily as a result of a 1957 Secretary of Defense policy statement calling for an integrated DOD telecommunications system.

MISSION

Originally, the primary mission of DCA was the operational control and management direction of the newly established Defense Communications System to ensure that the System could meet DOD's long-haul, point-to-point telecommunications requirements. While DCA was given the responsibility of planning, engineering, and managing the Defense Communications System, the military services retained the responsibility for operating and maintaining the stations that made up the system.

The Defense Communications System was a consolidation of three separate communications systems operated independently by the three services prior to the establishment of DCA. The concept of one DOD agency to manage and operate the Defense Communications System was developed to eliminate duplication among the services and place the communications responsibility in one DOD element. All personnel for the new agency were taken from the three services.

From 1960 to 1965, DCA assumed several major missions, including engineering, technical and automated data processing (ADP) support for the National Military Command System, and for joint war gaming.

In an effort to consolidate communications management within DOD, the functions of the Air Force Office of Commercial Communications Management, the White House Signal Agency, and the Operational and Management Division of Civil Defense Communications were transferred to DCA. In addition, DCA was designated the focal point for the integration of space and ground elements of the Communications Satellite System. The Director, DCA, became the Chairman of the Military Communications Electronics Board and Manager of the National Communications System. The organizations that accompanied these responsibilities are separate organizations under the Director, DCA.

The expansion of DCA continued from 1966 to 1970 with the responsibility for (1) developing and planning the Defense Special Security Communications System, (2) providing technical ADP support for the Office of the Secretary of Defense Special

Assistant for Strategic Mobility, and (3) providing technical support for the Joint Chiefs of Staff and military departments in developing and maintaining the World Wide Military Command and Control System Standard Automation Data Processing System (Joint Technical Support Agency).

Major missions assigned DCA from 1971 to 1975 included responsibility for the Minimum Essential Emergency Communications Net and the Military Satellite Communications System Office. Two significant missions were assigned to DCA from 1976 to 1980: the World Wide Military Command and Control System engineering effort and the responsibility for computerized activity of the National Operations Technical Coordination Center.

Since 1980, the following functions have been assigned to DCA: (1) the Theater Mission Planning System was transferred to DCA from the Navy Joint Cruise Missile Project Office, (2) development and management of the Defense Data Network, and the Defense Switched Network, and (3) the ADP software responsibilities for the National Emergency Airborne Command Post.

The primary missions of DCA continue to be support for DCS, staffing the White House Communications Agency, and providing ADP support to the National Military Command System.

DEFENSE CONTRACT AUDIT AGENCY**ESTABLISHMENT**

The Defense Contract Audit Agency (DCAA) was established in 1965 by the Direction of the Secretary of Defense as result of recommendations made by a DOD Comptroller Contract Audit Task Force formed in 1963.

MISSION

As stated in its charter, DCAA's mission is to:

- 1) perform all necessary contract audit for DOD and provide accounting and financial advisory services regarding contracts and subcontracts to all DOD components responsible for procurement and contract administration. These services are to be provided in connection with negotiation, administration, and settlement of contracts and subcontracts; and
- 2) provide contract audit service to other government agencies as appropriate.

DCAA's stated mission has not changed over the years, but the audit objectives have expanded since 1965. Today, most of DCAA's audit efforts fall into five areas: (1) audit of contractor proposals, (2) audit of contractor incurred cost, (3) direct audit, (4) audit of contractor compliance with cost accounting standards requirements, and (5) defective pricing audits. In addition, since its inception, DCAA has provided continuous contract audit support for various non-DOD agencies, whenever such arrangements are in the interest of the government. Approximately 30 non-DOD agencies use DCAA services including the National Aeronautics and Space Administration, the Department of Energy, the Environmental Protection Agency, the Department of Transportation, the Department of Health and Human Services, and the Department of the Interior.

By special agreement, DCAA also provides contract audit and financial advisory services to allied nations which purchase U.S. produced defense supplies, equipment, and weapons systems.

All of DCAA's efforts to support non-DOD agencies and allied nations are performed on a reimbursable basis.

DEFENSE INVESTIGATIVE SERVICE

ESTABLISHMENT

In 1970, a Blue Ribbon Defense Panel stated that consolidation of the non-combatant function of DOD personnel security investigation could lead to savings. The matter was studied further within the Office of Management and Budget (OMB) and resulted in 1971 with an OMB recommendation, and subsequent approval by the President, for the creation of an Office of Defense Investigation. In 1972, the Defense Investigative Service (DIS) was established.

MISSION

DIS is responsible for Personnel Security Investigations (PSIs) for DOD components and for other U.S. government activities. PSIs are performed for all federal military, civilian, and non-federal industry personnel who require access to classified defense documents. In addition, DIS is responsible for the Industrial Security Program (ISP) which inspects private sector firms for their suitability to conduct classified work for the government, provides uniform handling and protection of classified industrial information, develops and promotes the physical protection of certain key industrial facilities important to defense production and mobilization, and inspects DOD contractors having possession or custody of sensitive conventional arms, ammunition, and explosives in connection with DOD contracts.

PSIs include investigating alleged subversive affiliations, adverse suitability information, or any other situation that requires resolution to complete the PSI. In July 1983, DIS reinstated the periodic reinvestigation for persons having access to Top Secret or Sensitive Compartmental Information.

In 1980 DIS assumed responsibility for the Industrial Security Program (ISP) from the Defense Logistics Agency. The ISP was created to administer and coordinate the similar industrial security programs of the military departments and other defense agencies. The ISP is composed of four distinct programs:

1. Defense Industrial Security Program. Establishes and maintains uniform standards for handling and protection of classified information accessible to private industry.
2. Facility Clearance Program. Processes and controls industrial facilities' clearances.

3. Industrial Facility Protection Program. Develops and promotes physical security measures at certain key industrial facilities.
4. Arms, Ammunition, and Explosives Program. Inspects contractors having possession or custody of sensitive conventional arms, ammunitions, and explosives.

In 1977 DIS was assigned the additional mission of law enforcement in detecting fraud, waste, and abuse within DOD. In 1981 this mission was transferred to the Inspector General of DOD and the Defense Criminal Investigative Service was formed under that office. DIS retained some law enforcement responsibilities concerning the unauthorized release of government information.

DEFENSE LOGISTICS AGENCY

ESTABLISHMENT

In recognition of the need for an integrated military supply function, and after receiving congressional encouragement, the Secretary of Defense created the Defense Supply Agency (DSA) in 1961. The agency became operational as of January 1, 1962, and was renamed the Defense Logistics Agency in 1977.

MISSION

The Defense Supply Agency was established to provide worldwide support to the military services for commercially available items. The agency assumed the single manager responsibility for certain commodity areas and logistics services previously assigned to the military services.

In 1965 DSA was assigned responsibility for the Defense Contract Administration Service (DCAS). Until that time, each military service had administered its own contracts. DCAS was to ensure uniform contract administration throughout DOD regardless of which service awarded the contract, and to present a single face to industry in the administration of contracts.

DSA's mission was confined to the United States until 1972 when responsibility for DOD property disposal operations was extended overseas. DSA's fuel mission was also enlarged to include responsibility for worldwide procurement, management, and distribution of coal and bulk petroleum. In 1973, DSA assumed responsibility for worldwide management and distribution of food items for military dining facilities and commissaries.

In 1977 the agency was renamed the Defense Logistics Agency (DLA) in recognition of its expanded mission, which was to:

1. Function as an integral element of the DOD military logistics system and, as such, direct its efforts and operations toward logistics support of the missions of the military departments and the Unified and Specified Commands under all conditions.
2. Provide effective and economical support to the military departments, other DOD components, federal civil agencies, foreign governments, and others as authorized, for:
 - a. Assigned materiel commodities and items of supply which are determined, through application of approved DOD criteria, to be susceptible of integrated management by a single agency for all of the military departments or as otherwise assigned.

- b. Logistics services directly associated with the supply management function and other support services as directed by the Secretary of Defense.

3. Administer the operation of other DOD programs as assigned.

Today, DLA's mission is to provide effective and economical logistics support to the military services in contracting, supply, contract administration technical services, and reutilization and marketing of excess DOD property.

DEFENSE MAPPING AGENCY

ESTABLISHMENT

The President's Blue Ribbon Defense Panel, studying the reorganization of DOD in 1969-1970, recommended establishing a single mapping agency to bring all DOD mapping, charting, and geodetic (MC&G) activities together into a single agency. While the recommendation was not adopted then by the Secretary of Defense, it was later considered by the Executive Office of the President and, in November 1971, an executive order directed DOD to combine the three service mapping organizations.

The approach selected was to include in the new organization the major MC&G production facilities and to retain in the military services those functions concerned with acquiring of basic data for map and chart development as well as most research and development. Resources and personnel were transferred from the military services and the Defense Intelligence Agency to form the Defense Mapping Agency (DMA) in 1972.

MISSION

DMA's missions are to (1) provide MC&G support to the Secretary of Defense, the Joint Chiefs of Staff, the military services, and other DOD components, through the production and worldwide distribution of maps, charts, precise positioning data, and digital data for strategic and tactical military operations and weapons systems, (2) serve as program manager and coordinator of all DOD MC&G resources and activities, and (3) carry out statutory responsibilities for providing nautical charts and marine navigation data for the use of all vessels of the United States and of navigators generally.

To accomplish its missions, DMA is organized into a headquarters and the following six components.

1. Aerospace Center produces, among other items, aeronautical charts, air target materials, digital data, point positioning data bases, flight information publications, space mission charts, and a wide spectrum of technical data relevant to the earth and its aerospace environment essential to navigation and missileery.

2. Hydrographic/Topographic Center produces hydrographic charts and related data for surface and subsurface navigation, topographic maps for land forces, digital terrain elevation data for cruise missiles, plus some products for air operations. The Center has primary responsibility for generating products and services in supporting the military weapon systems.

3. Special Program Office for Exploitation Modernization was established in 1982 and is the newest component. The mission of this component is to develop and implement a capability to produce DMA products using hardcopy and softcopy computerized production techniques from materials collected by advanced acquisition systems. The ultimate mission of this component is to develop and have operational by early 1990 an all digital (softcopy) production system.

4. Office of Distribution Services handles worldwide distribution of DMA products.

5. Defense Mapping School is responsible for providing technical MC&G and MC&G-related training to military personnel of the three services, certain civilian personnel, and foreign military personnel on a selective basis.

6. Inter-American Geodetic Survey is responsible for cooperative mapping and charting agreements conducted jointly between the United States and national mapping agencies in Latin American countries.

DEFENSE NUCLEAR AGENCY**ESTABLISHMENT**

The Defense Nuclear Agency's (DNA) current mission was originally carried out by the "Manhattan Project," formed in 1942. When the Atomic Energy Commission took over the Manhattan Project in 1947, all military staff assigned to the project were assigned to a new organization--the Armed Forces Special Weapons Project (AFSWP) which was created as a joint Army-Navy atomic energy organization responsible for carrying out all of the Manhattan Project's military service functions. Following the enactment of the DOD Reorganization Act of 1958, AFSWP was reorganized and redesignated the Defense Atomic Support Agency (DASA). The agency no longer reported to the individual military services, but instead became a DOD agency reporting to the Secretary of Defense through the Joint Chiefs of Staff. In 1971 DASA was rechartered as DNA.

MISSION

In 1947, when AFSWP was created, the organization was responsible for what had originally been the Manhattan Project's military functions. These functions included military participation in the development of all atomic weapons and technical training of special personnel, such as bomb commanders and weaponeers (bomb activators). Between 1947 and 1952, AFSWP assumed additional responsibilities and facilities with corresponding personnel increases. During this period, Sandia Base, New Mexico, was transferred to AFSWP and six national stockpile sites were placed under the project's control. In addition, the Test Command and the Nuclear Weapons School were created under AFSWP.

In 1951 AFSWP's mission and responsibilities were redefined. At this point, AFSWP was directed to use existing agencies of the armed forces to carry out programs for which suitable facilities already existed.

In 1958 AFSWP assumed two new functions: (1) the Joint Atomic Information Exchange Group to act as the central clearing house for all atomic information proposed for release, and (2) the Joint Nuclear Accident Coordinating Center to deal with and respond to a nuclear incident or accident.

In 1961, after AFSWP was reorganized and redesignated as DASA, the DOD Damage Assessment Center was established within DASA. However, in 1963, this function was transferred to the Defense Communications Agency (DCA). Also, in 1964, the Armed Forces Radiobiology Research Institute was transferred from the Navy to DASA. The mission of this institute is to conduct

research in the field of radiobiology and related matters that are essential to the operational and medical support of DOD and the military services.

In 1964 DASA's mission was changed by DOD so that DASA was now required to provide support to the Secretary of Defense, the Joint Chiefs of Staff, the military services and other DOD components in matters concerning nuclear weapons, nuclear weapons effects, nuclear weapons testing, and other aspects of the DOD nuclear energy program as might be directed by the Secretary of Defense.

Between 1966 and 1973, DASA went through a number of reductions in both responsibilities and personnel. During this period organizational transfers such as assigning the national stockpiles to the services and transferring the Nuclear Weapons School and Sandia Base Hospital to the Air Force took place.

In 1971, during the rechartering of DASA as DNA, the agency's functions and missions were redefined. DNA was no longer responsible for storing and maintaining nuclear weapons, reviewing operational aspects of nuclear weapons safety, or reviewing the validity of operational requirements for new nuclear weapons. In addition, DNA's training responsibility was also reduced.

DNA's current mission, unchanged since 1971, is to provide consolidated management of the DOD nuclear weapons stockpile, DOD nuclear weapons testing, and nuclear weapons effects research. DNA is also responsible for providing staff advice and assistance in nuclear weapons matters to the Secretary of Defense, the military services, the Joint Chiefs of Staff, and other DOD and non-DOD government agencies.

Although DNA's basic mission has remained unchanged since 1971, the agency has become responsible for a number of major new activities.

In 1976 DNA was assigned the responsibility by the Secretary of Defense for coordinating a major effort aimed at determining how to enhance the security of nuclear equipment and facilities around the world. This is an ongoing program which continually assesses the security of these facilities, makes recommendations for improvement, and reassesses the security in light of the changes implemented.

In 1978 DNA was assigned the responsibility for theatre nuclear forces survivability by the Under Secretary of Defense (Research and Development). This is a continuing effort to determine what pre-conflict actions can be taken to enhance the survivability of armed forces in case of conflict involving nuclear weapons.

In 1979, DNA was assigned the responsibility for Accident Response Planning by the Joint Chiefs of Staff. This has been a major effort over the past several years aimed at determining how to respond in case of a nuclear accident. DNA conducts field exercises to test procedures for responding to such an accident, makes recommendations for improving these procedures, and then reassesses the procedures.

DEFENSE SECURITY ASSISTANCE AGENCYESTABLISHMENT

The Defense Security Assistance Agency (DSAA) was established in 1971 as an agency of DOD operating under the direction, authority, and control of the Assistant Secretary of Defense for International Security Affairs.

MISSION

DSAA's mission is to direct, administer, and supervise the execution of security assistance program responsibilities for the Secretary of Defense. The responsibilities are established by various statutory authorities concerning the administration of military assistance, international military education and training, credit financing, and foreign military sales.

The three main programs administered by DSAA are

1. The Foreign Military Sales Program.
2. The Military Assistance Program.
3. The International Military Education and Training Program.

^aDCA's FY 1975 authorized civilian and military work force mix is not available. These figures are estimated using DCA's traditional work force mix of 55 percent civilian and 45 percent military.

^bThese figures represent DLA's authorized FY 1975 and FY 1986 civilian and military work force for operations and maintenance functions only. Operations and maintenance activities involve approximately 95 percent of DLA's authorized work force.

FEDERAL CIVILIAN WORK FORCE OCCUPATIONAL INFORMATION

The federal government uses many different systems to set pay for its employees, however, two systems, the general schedule (GS) and the federal wage system apply to approximately 83 percent of federal civilian employees.

The GS covers most white-collar positions and is divided into 18 pay grades. Included in the GS are General Management (GM) positions which are in pay grades 13 to 15 and fall under the Merit Pay System. All of the GS positions are subdivided into 22 occupational groups. A brief explanation of the 22 occupational groups is included below.

GENERAL SCHEDULE OCCUPATIONAL GROUPS

Miscellaneous Occupations Group

Employees in these positions administer, supervise, or perform work which cannot be included in other occupational groups either because the duties are unique or because they are complex and come, in part, under various groups.

Social Science, Psychology, and Welfare Group

Employees in these positions advise on, administer, supervise, or perform research or other professional and scientific work, subordinate technical work, or related clerical work in one or more of the social sciences: psychology, social work, recreational activities, or the administration of public welfare and insurance programs.

Personnel Management and Industrial Relations Group

Employees in these positions advise on, administer, supervise, or perform work involved in the various phases of personnel management and industrial relations.

General Administrative Clerical, and Office Services Group

Employees in these positions administer, supervise, or perform work involved in management analysis; stenography, typing, correspondence, and secretarial work; mail and file work; the operation of office appliances; the operation of communications equipment, use of codes and ciphers, and procurement of the most effective and efficient communications services; the operation of microform equipment, peripheral equipment, mail processing equipment, duplicating equipment, and copier/duplicating equipment; and other work of a general clerical and administrative nature.

Biological Science Group

Employees in these positions advise on, administer, supervise, or perform research or other professional and scientific work or subordinate technical work in any of the fields of science concerned with living organisms, their distribution, characteristics, life processes, and adaptations and relations to the environment; the soil, its properties and distribution, and the living organisms growing in or on the soil; and the management, conservation, or utilization thereof for particular purposes or uses.

Accounting and Budget Group

Employees in these positions advise on, administer, supervise, or perform professional, technical, or related clerical work of an accounting, budget administration, related financial management, or similar nature.

Medical, Hospital, Dental, and Public Health Group

Employees in these positions advise on, administer, supervise, or perform research or other professional and scientific work, subordinate technical work, or related clerical work in the several branches of medicine, surgery, and dentistry or in related patient-care services such as dietetics, nursing, occupational therapy, physical therapy, pharmacy, and others.

Veterinary Medical Science Group

Employees in these positions advise and consult on, administer, manage, supervise, or perform research or other professional and scientific work in the various branches of veterinary medical science.

Engineering and Architecture Group

Employees in these positions advise on, administer, supervise, or perform professional, scientific, or technical work concerned with engineering or architectural projects, facilities, structures, systems, processes, equipment, devices, material or methods.

Legal and Kindred Group

Employees in these positions advise on, administer, supervise, or perform professional legal work in the preparation for trial and the trial and argument of cases, the presiding at formal hearings afforded by a commission, board, or other body having quasi-judicial powers, as part of its administrative procedure, the administration of laws entrusted to an agency, the preparation or rendering of authoritative or advisory legal

opinions or decisions to other federal agencies or to administrative officials of their own agency, the preparation of various legal documents, and the performance of other work requiring training equivalent to that represented by graduation from a recognized law school and in some instances requiring admission to the bar; or quasi-legal work which requires knowledge of particular laws, or of regulations, precedents, or departmental practice based thereon, but which does not require such legal training or admissions to the bar.

Information and Arts Group

Employees in these positions perform professional, artistic, technical, or clerical work in (1) the communication of information and ideas through verbal, visual, or pictorial means, (2) the collection, custody, presentation, display, and interpretation of art works, cultural objects, and other artifacts, or (3) a branch of fine or applied arts such as industrial design, interior design, or musical composition.

Business and Industry Group

Employees in these positions advise on, administer, supervise, or perform work pertaining to and requiring a knowledge of business and trade practices, characteristics and use of equipment, products, or property, or industrial production methods and processes, including the conduct of investigations and studies; the collection, analysis, and dissemination of information; the establishment and maintenance of contacts with industry and commerce; the provision of advisory services; the examination and appraisal of merchandise or property; and the administration of regulatory provisions and controls.

Copyright, Patent, and Trademark Group

Employees in these positions advise on, administer, supervise, or perform professional scientific, technical, and legal work involved in the cataloging and registration of copyrights, in the classification and issuance of patents, in the registration of trademarks, in the prosecution of applications for patents before the Patent Office, and in the giving of advice to government officials on patent matters.

Physical Sciences Group

Employees in these positions advise on, administer, supervise, or perform research or other professional and scientific work or subordinate technical work in any of the fields of science concerned with matter, energy, physical space, time, nature of physical measurement, and fundamental structural particles; and the nature of the physical environment.

Library and Archives Group

Employees in these positions advise on, administer, supervise, or perform professional and scientific work or subordinate technical work in the various phases of library and archival science.

Mathematics and Statistics Group

Employees in these positions advise on, administer, supervise, or perform research or other professional and scientific work or related clerical work in basic mathematical principles, methods, procedures, or relationships, including the development and application of mathematical methods for the investigation and solution of problems; the development and application of statistical theory in the selection, collection, classification, adjustment, analysis, and interpretation of data; the development and application of mathematical, statistical, and financial principles to programs or problems involving life and property risks; and any other professional and scientific or related clerical work requiring primarily and mainly the understanding and use of mathematical theories, methods, and operations.

Equipment, Facilities, and Services Group

Employees in these positions advise on, manage, or provide instructions and information concerning the operation, maintenance, and use of equipment, shops, buildings, laundries, printing plants, powerplants, cemeteries, or other government facilities, or other work involving services provided predominantly by persons in trades, crafts, or manual-labor operations.

Education Group

Employees in these positions advise on, administer, supervise, or perform research or other professional work in the field of education and training, or related work of a technical, specialized, or support nature.

Investigation Group

Employees in these positions advise on, administer, supervise, or perform investigation, inspection, or enforcement work primarily concerned with alleged or suspected offenses against the laws of the United States, or such work primarily concerned with determining compliance with laws and regulations.

Quality Assurance, Inspection, and Grading Group

Employees in these positions advise on, supervise, or perform administrative or technical work primarily concerned with the quality assurance or inspection of material, facilities, and processes; or with the grading of commodities under official standards.

Supply Group

Employees in these positions are involved in work concerned with furnishing all types of supplies, equipment, material, property (except real estate), and certain services to components of the federal government, industrial, or other concerns under contract to the government, or receiving supplies from the federal government.

Transportation Group

Employees in these positions advise on, administer, supervise, or perform clerical, administrative, or technical work involved in the provision of transportation service to the government, the regulation of transportation utilities by the government, or the management of government-funded transportation programs, including transportation research and development projects.
